TALHA GÜRLER

SOFTWARE DEVELOPER

CONTACT

- +90 553 354 80 17
- talhagurler11@gmail.com
- Kocaeli / Istanbul, Türkiye
- talha4111.github.io
  github.com/talha4111
- linkedin.com/in/talha-gürler-919b4b284

SKILLS

- Python, TypeScript, JavaScript
- Java (OOP & Swing), C (C99), SQL
- React 19, Tailwind CSS, HTML5/CSS3
- AI, LLMs, Multimodal RAG & ChromaDB
- Machine Learning (XGBoost, Scikit-Learn, Optuna, KNN, Decision Trees)
- Algorithmic Finance (Binance CCXT, QuantConnect, Equity Factor Models)
- Flask, Streamlit, REST API, Git, GitHub
- Offline-First Mobile & PWA (Capacitor APK)

LANGUAGES

- Turkish (Native)
- English (Professional Working Proficiency)

SUMMARY / PROFILE

Computer Engineering student at Kocaeli University with strong hands-on expertise in Artificial Intelligence (Multimodal RAG, Computer Vision, XGBoost), Quantitative FinTech, and modern Full-Stack/Mobile development (React, TypeScript, Python, Java, C). Team-oriented, analytical problem solver focused on delivering secure, high-performance software solutions.

PROJECTS

StockPredictionPro & QuantBot (AI Crypto & Equity Platform): GitHub ↗
Dual-engine FinTech platform featuring a Binance Futures (CCXT) XGBoost/Optuna crypto execution engine and a 10-page secured (2FA/WAF) single-stock analysis, investment committee, and 4-pillar factor platform.

Makro Takip (AI Vision Nutrition & Mobile App): GitHub ↗
React 19, TypeScript, and Capacitor Android app using Gemini 2.5 Vision to estimate meal portions and macros from photos, paired with a deterministic macro gap solver and barcode health radar.

EduBrain-AI & LingoReader AI (Multimodal RAG & Language Platforms): GitHub ↗
Multimodal RAG assistant indexing PDFs and handwritten notes into ChromaDB via Gemini Vision, alongside a real-time Flask SSE & OpenAI Whisper YouTube karaoke language learning platform.

Systems, Database & Automation Projects (PROLAB 1-2-3 & YHT Bot): GitHub ↗
C99 multi-technician task scheduler (-15% makespan optimization), pure Java from-scratch KNN/CART sales predictor, PyQt5 JSON-to-3NF SQL converter, and 24/7 Selenium high-speed train ticket bot.

WORK EXPERIENCE

Independent Software & AI Developer (Open Source & R&D)
Full-Stack & AI/ML Software Developer | 2024 - Present

- Architected and delivered end-to-end production systems across algorithmic trading (Binance Futures XGBoost & Equity Factor Models), Multimodal RAG, and computer vision mobile apps.
- Built offline-first web and Android applications using React 19, TypeScript, Python (Flask/Streamlit), and SQLite/IndexedDB with enterprise authentication (PBKDF2, TOTP 2FA, WAF).

Kocaeli University — Programming Lab & Engineering Projects
Computer Engineering Project Developer | 2023 - Present

- Developed a C99 OS task scheduling simulator, from-scratch Java machine learning classifiers (KNN & CART), and a 3NF relational database normalization tool documented in IEEE format.

EDUCATION

Kocaeli University
B.Sc. in Computer Engineering | 2023 - Present
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), Programming Lab I & II, Database Management Systems, Discrete Mathematics, Microprocessors.

CERTIFICATES & CORE COMPETENCIES

- Artificial Intelligence, Machine Learning (XGBoost) & Multimodal RAG Architecture
- Quantitative Finance, Algorithmic Trading & Cross-Sectional Factor Modeling (QuantConnect & CCXT)
- Modern Web & Mobile Development (React, TypeScript, Python, Git & Version Control)
